**MAGNIFIER AND MAGNIFICATION INFORMATION**

**Magnifier Power** - shown by a number placed in front of the letter x. This refers to how much larger an object will appear when viewed through the magnifier lens. For example, a magnifier with a 2x power will make an object appear 2 times its actual size.

**Diopter** – also a measure of magnification referring to the curvature of the lens. As the curvature increases, the object will appear larger. The higher the Dioptic power, the greater the magnification.
